

Claims

1. A subscriber terminal for a radio system, comprising:
a transceiver configured to receive calls and messages;
a control unit connected to the transceiver configured to save un-
5 answered call data and messages relating to unanswered calls, and to constitute
contact attempts from the unanswered call data and the messages relating to
the unanswered calls; and
a user interface connected to the control unit configured to present
the contact attempts.
- 10 2. The subscriber terminal of claim 1, wherein for the constitution of
the contact attempts the control unit is configured to combine together such
unanswered call data and such a message relating to an unanswered call
which both refer to the same caller.
3. The subscriber terminal of claim 2, wherein the control unit is con-
15 figured to find a reference to the same caller if both the unanswered call data
and the message relating to the unanswered call both contain the same caller
identifier.
4. The subscriber terminal of claim 1, wherein the control unit is con-
figured to display in the user interface the contact attempts as a list of contact
20 attempts.
5. The subscriber terminal of claim 4, wherein the control unit is con-
figured to display the list of contact attempts as a list of callers.
6. The subscriber terminal of claim 1, wherein the control unit is con-
figured to receive a selection regarding a contact attempt from the user inter-
25 face and to display the selected contact attempt in more detail in the user inter-
face.
7. The subscriber terminal of claim 1, wherein the control unit is con-
figured to fetch a name for the caller present in the contact attempts from a
phonebook and to display the name of the caller in the user interface.
- 30 8. The subscriber terminal of claim 1, wherein the control unit is con-
figured to display in the user interface a selection mechanism, which, when
selected, makes a contact to a caller of the selected contact attempt.
9. The subscriber terminal of claim 1, wherein the message com-
prises a text message.
- 35 10. An arrangement for presenting contact attempts to a subscriber
terminal of a radio system, comprising:

receiving means for receiving calls and messages;
saving means for saving unanswered call data and messages relating to unanswered calls;
constituting means for constituting contact attempts from the unanswered call data and the messages relating to the unanswered calls; and
presenting means for presenting the contact attempts.

11. The arrangement of claim 10, wherein for the constitution of the contact attempts the constituting means combines together such unanswered call data and such a message relating to an unanswered call which both refer to the same caller.

12. The arrangement of claim 11, wherein the constituting means finds a reference to the same caller if both the unanswered call data and the message relating to the unanswered call both contain the same caller identifier.

13. The arrangement of claim 10, wherein presenting means displays the contact attempts as a list of contact attempts.

14. The arrangement of claim 13, wherein the presenting means displays the list of contact attempts as a list of callers.

15. The arrangement of claim 10, wherein the presenting means receives a selection regarding a contact attempt and displays the selected contact attempt in more detail.

16. The arrangement of claim 10, wherein the presenting means fetches a name for the caller present in the contact attempts from a phonebook and displays the name of the caller.

17. The arrangement of claim 10, wherein the presenting means displays a selection mechanism, which, when selected, makes a contact to a caller of the selected contact attempt.

18. The arrangement of claim 10, wherein the message comprises a text message.

19. A method for presenting contact attempts to a subscriber terminal of a radio system, comprising:

receiving calls and messages;
saving unanswered call data and messages relating to unanswered calls;
constituting contact attempts from the unanswered call data and the messages relating to the unanswered calls; and

presenting the contact attempts.

20. *The method of claim 19, wherein the constitution of the contact attempts comprises: combining together such unanswered call data and such a message relating to an unanswered call which both refer to the same caller.*

5 21. The method of claim 20, wherein a reference to the same caller is found if both the unanswered call data and the message relating to the unanswered call both contain the same caller identifier.

22. The method of claim 19, further comprising: displaying the contact attempts as a list of contact attempts.

10 23. The method of claim 22, further comprising: displaying the list of contact attempts as a list of callers.

24. The method of claim 19, further comprising: receiving a selection regarding a contact attempt and displaying the selected contact attempt in more detail.

15 25. The method of claim 19, further comprising: fetching a name for the caller present in the contact attempts and displaying the name of the caller.

26. The method of claim 19, further comprising: displaying a selection mechanism, which, when selected, makes a contact to a caller of the selected contact attempt.

20 27. The method of claim 19, wherein the message comprises a text message.

28. A computer program distribution medium readable by a computer and encoding a computer program of instructions for executing a computer process for presenting contact attempts to a subscriber terminal of a radio system, the process comprising:

25 saving unanswered call data and messages relating to unanswered calls;

constituting contact attempts from the unanswered call data and the messages relating to the unanswered calls; and

30 presenting the contact attempts with a user interface of the subscriber terminal.

29. The computer program distribution medium of claim 28, wherein the constitution of the contact attempts comprises: combining together such unanswered call data and such a message relating to an unanswered call
35 which both refer to the same caller.

30. The computer program distribution medium of claim 29, wherein a reference to the same caller is found if both the unanswered call data and the message relating to the unanswered call both contain the same caller identifier.

5 31. The computer program distribution medium of claim 28, further comprising: displaying the contact attempts as a list of contact attempts with the user interface.

 32. The computer program distribution medium of claim 31, further comprising: displaying the list of contact attempts as a list of callers with the
10 user interface.

 33. The computer program distribution medium of claim 28, further comprising: receiving a selection regarding a contact attempt and displaying the selected contact attempt in more detail with the user interface.

 34. The computer program distribution medium of claim 28, further
15 comprising: fetching a name for the caller present in the contact attempts and displaying the name of the caller with the user interface.

 35. The computer program distribution medium of claim 28, further comprising: displaying a selection mechanism with the user interface, which, when selected, makes a contact to a caller of the selected contact attempt.

20 36. The computer program distribution medium of claim 28, wherein the message comprises a text message.

 37. The computer program distribution medium of claim 28, the distribution medium comprising a computer readable medium, a program storage medium, a record medium, a computer readable memory, a computer readable
25 software distribution package, a computer readable signal, a computer readable telecommunications signal, and a computer readable compressed software package.
